FIRECHIEF WILDFIRE RANGE

A robust range of wildfire firefighting tools.

Fire Beater (FBT2) - Designed to effectively smother fires in general open areas such as grass fires. Industrial grade rubber beater head knocks out flames and halts the spread of fire. Long, corrosion/rot proof handle allows beating operation to be carried out at a distance.

Forestry Rakehoe (FFR1) - A McLeod rake with a dual-purpose blade on a long, fibreglass handle designed to rake fire lines with the teeth and cut branches and turf with the sharpened hoe edge. A pin prevents the tool head from rotating. Collapsible to allow transport to remote locations. Rot/corrosion proof handle with powder-coated finish and rubber hand grip.

Forestry Rake (FFR2) - A bladed fire rake used to cut through roots and brush. Features serrated V-shaped cutting tines made of High-carbon heat-treated steel, which are individually removable for sharpening. The head can also be removed via a single screw for safe transport and storage. Rot/corrosion proof 30mm diameter fibreglass handle with rubber grip.

Short Firefighters Axe (FFA1) - All-metal construction Pulaski-style blade, 1000v resistant rubber hand grip.

Long Firefighters Axe (FFA2) - Versatile and heavy-duty Pulaski-style axe. Able to both dig soil and chop wood. Typically used to construct firebreaks. Fibreglass enforced rod handle core construction, with PP plastic coating and thermoplastic rubber hand grip.
